DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. § 121:
 - I. Claims 1-12, 14 and 15, drawn to a nucleic acid molecule encoding a functional ALS which has an Ala122-Thr122 or an Ala205-Val 206 substitution, a transformation vector comprising said nucleic acid molecule, a transformed plant comprising said nucleic acid molecule and method of using said nucleic acid molecule, classified in class 800, subclass 300, for example.
 - II. Claim 13, drawn to a method for detecting the presence of a nucleic acid molecule, classified in class 435, subclass 6, for example.
 - III. Claim 16, drawn to a pair of DNA primers, classified in class 536, subclass 24.3, for example.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated because the method of Group II has different starting materials, different method steps and different products made than the methods encompassed by Group I, and it appears that the method of detecting a nucleic acid of Group II does not require the nucleic acid molecule of Group I.

3. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated because the nucleic acid molecule of Group I is structurally, functionally and compositionally distinct from the primer pair encompassed by Group III.

4. Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the set of primer pairs of Group III can be used in a materially different process than the method of detecting a nucleic acid molecule of Group II, such as in a DNA sequencing method.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, recognized divergent subject matter, and because the search required for one of the groups is not required for another, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete within one month (not less than 30 days) must include an election of the invention to be examined even though the requirement be traversed (37 CFR § 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR § 1.48(b) and by the fee required under 37 CFR § 1.17(i).

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David H. Kruse, Ph.D. whose telephone number is (571) 272-0799. The examiner can normally be reached on Monday to Friday from 8:00 a.m. to 4:30 p.m.
